

LIGHTWEIGHT 35KV CONDUCTOR COVER
from SALISBURY

When it's necessary to cover long spans and weight is a prime consideration. Salisbury has again set industry standards by addressing this issue with the new 35kV lightweight conductor cover.

The 21826 is a six foot, (1.8m) Type I high density, cross link polyethylene, safety orange cover rated Class 4 (36.6 kV guarded phase to guarded phase). It is applied using rubber gloves when following appropriate company work rules. The inside diameter is 3" making it useful on a wide range of conductor sizes.

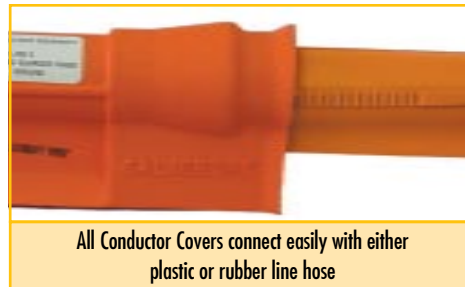

The unique "connector-stop" molded into one end prevents covers from overlapping during installation. This eliminates wasted time moving trucks to re-connect sections that did not couple correctly. This cover is also compatible with Salisbury 1.5" I.D. class 3

Unique connector stop

Cat. No.	Description ft. (m)	Class	Weight ea. lbs. (kgs)
35kV CONDUCTOR COVER			
21826	6' (1.8) Cover	4	3.0 (1.4)

All guards are tested per ASTM F712 specifications

All Conductor Covers connect easily with either plastic or rubber line hose
